Experimental physicist interested in a wide variety of precision measurement including gravitational wave observation, tests of gravity, and rotational seismology

## Education

University of Washington	Seattle, WA
- Ph.D. Physics	2020
Dissertation: <i>Precision Mechanical Rotation Sensors for Terrestrial Gravitational Wave Observatories</i>	
- M.S. Physics	2017
Elective Coursework: quantum computing, machine learning, high performance computing, data analysis, seismology	
.....	
Humboldt State University	Arcata, CA
- B.S. Physics	2015
.....	
College of the Redwoods	Eureka, CA
- A.A. Science	2013
- A.A Science Exploration	2013

## Experience

University of Washington	Seattle, WA
Center for Experimental Nuclear Physics and Astrophysics (CENPA) Eöt-Wash Experimental Gravity Group	
- Postdoctoral Scholar	July 2020 - Present
- Research Assistant	Jan. 2017 - June 2020
- Laboratory Technician	Aug. 2015 - Sep. 2016

The Eöt-Wash group specializes in cutting-edge tests of gravity and searches for new physics utilizing precision mechanical systems (torsion balances and beam balances). I was involved in a wide-range of projects but focused on instrumentation for the LIGO gravitational wave observatories.

Humboldt State University	Arcata, CA
Gravity Lab	
- Undergraduate Researcher	Sep. 2013 - May 2015

The HSU Gravity Lab is constructing a torsion balance experiment to test both the inverse square law and equivalence principle. As a student researcher, I operated and maintained the apparatus, led the fabrication of the pendulum, the mechanical and electrostatic controls, and the in-vacuum attractor mass assembly.

## Research Interests

More details ([mpross.net](http://mpross.net))

**Gravitational wave astronomy:** Compact binary coalescence, Stochastic gravitational wave background, Measurements of Hubble's constant, Black hole populations, Neutron star equation of state

**Tests of Gravity:** Tests of the inverse square law, Equivalence principle verification, Searches for ultra-light dark matter, Gravitational wave tests of General Relativity

---

**Instrumentation:** Torsion balances, Beam balances, Precision angle sensing, Interferometric angle sensing, Gravitational calibration, Seismic isolation

---

**Seismology/Seismic Noise Sources:** Rotational seismology, Seismometer tilt contamination, Atmospheric-ground tilt coupling, Newtonian-noise subtraction

---
